

12 Silencers Faster Than You Can Say Helmholtz Acoustic Resonator!

A CCI Company

...Helping you meet and exceed noise reduction goals

Application Power Gas Transmission Oil and Gas Other

Where do you go when you want 12 silencers delivered to you in less than 2 months? Impossible? Read on...

In July 2005, Tennessee Gas Pipeline - TGP (a subsidiary of El Paso) issued a request to bid to replace their existing Engine Exhaust Silencers. Not too long after, there was an equipment failure that reduced production capacity at the plant by approximately 25%. While working to bring the failed units back online, TGP took advantage of the unplanned partial system shut-down to restore the exhaust silencers. It was imperative that the new silencers be received by the first week of November.

On September 23rd, after winning the job to replace another manufacturer's silencers, Fluid Kinetics (FK) received the green light to begin manufacturing. This gave us barely over 6 weeks to complete and ship 12 full-sized silencers! It was crunch time. FK set to work and by the end of October, the EES silencers were ready for their journey to Texas.

The story doesn't end there; FK also removed and disposed of the old engine exhaust silencers (all 12 of them). At FK we understand the dynamics of a shut-down and the demands of a project. We work hard and fast to get your product out the door and to your site just when you need it while meeting your budget constraints. Our manufacturing facility is centrally located in Kansas enabling us to provide competitive and expedited delivery to any part of the USA and abroad.

Each EES silencer is custom designed using multi-chamber acoustic resonance principles while minimizing pressure drop to the system.

The EES engine exhaust silencer provides high performance flow path pulsation and noise control for internal combustion reciprocating engines.

Customer: El Paso

Date: November 2005

Location: Cleveland, TX USA

Application: Engine Exhaust Silencers [Model EES]
